Subject RE: Carrolltown Borough WER Study 

Hey Tom,

I took a look at this report. I'm OK until I get to the "Final Study Calculations." Do they mean to say 56 ug/l "criteria continuous concentrations" (not average daily concentration) and 112 ug/l "criteria maximum concentration" (not peak daily concentrations)? This is part of my on-going effort to make sure everyone understands that the WER is applied to the criteria BEFORE it goes into the calculation of the water quality-based effluent permit limit.

Thanks,

Denise
